

SD-WAN Transforms Network Performance

We can show you how to simultaneously reduce costs, increase performance and improve reliability.

AEON offers Smart, Secure Routing that does exactly what your business needs. With AEON's SD-WAN service you can build service-centric fabrics that deliver breakthroughs in simplicity, security, performance, and savings for your business. And most importantly, it creates a networking environment that delivers the agility your business needs to move with your customers and outpace your competitors.

- **Improve application performance:** Benefit from clearer VoIP calls, jitter-free video conferencing and faster file transfers.
- **Cost effective alternative for MPLS**
- **Cut down on support tickets:** Cut costs to address other priorities.
- **Be more agile:** Spin up new offices faster, support short-term retail opportunities like pop-ups and be confident that your network is always ready.
- **Increase uptime:** Ensure that your applications are always available, maintaining high productivity across the organization.
- **Improve network stability:** Bundle less-expensive consumer data lines together to improve performance and create reliable connectivity across branch locations.

SECURITY	PERFORMANCE	AGILITY	COST
Step up to Zero Trust Security with a deny by default architecture, all built into one easy-to-manage solution.	Experience better connectivity between remote locations and faster access to the cloud, with software-based, Session Smart routing.	Imagine being able to manage your network more efficiently, spinning up new services on the fly and making global configuration and policy changes faster than ever.	Get used to serious software savings, cheaper data transfer to the cloud, fewer redundant investments and lower operational expenses.
